# DigitalBlanks™

Directions: Make several copies of the sheet labeled "Test Sheet". This will help guide you as you position your art and type prior to running. We suggest aligning art and type at least ¼" away from perforations and diecuts. Many copiers and laser printers don't pull paper completely straight.

Laser Printer/Copier: Position art and type in your computer using desktop publishing or word processing software. Use the Test Sheets in your laser printer or copier to guide final adjustments. Your owner's manual should advise you to load paper in your printers's paper tray either horizontally or vertically. If not, use a Test Sheet to determine the paper's direction. When your Test Sheet looks as desired, load your DigitalBlanks™ into your paper tray and print.
